

Removal of loose particles, fibre, lint and dust from moving film, foil, paper or fabric is important for better quality and higher productivity on label presses, printing, coating, slitting and other such machines.

Valence offers a wide range of contact web cleaning systems to cater to a broad range of applications.

The **Valstat® contact web cleaner** is a combination of a tacky contact cleaning roller and an adhesive roll with replaceable adhesive sheets. Static charge eliminators, positioned before and after web cleaner make sure that the web entering and exiting is free of static charges.

The tacky roller covering is made of a specially designed polymer. This picks up loose dust, dirt and contaminants from moving web and transfers them to a pre-sheeted adhesive roll. The output web is thus free of contaminants.

As the adhesive roll picks up more and more dust from the tacky roll it gets completely used up. The operator can now quickly remove the used up adhesive layer and expose a fresh sheet beneath to continue picking up dust and contaminants.

Either single or both sides of the web can be cleaned, depending on the application.

### Features

- Suitable for various web widths up to 2.5 m
- Provides economical cleaning options with replaceable tacky roller covering
- Spare adhesive roll and roll covering easily available
- Easy integration in restricted spaces
- Can be mounted on an existing idler roller of the machine
